COMICCRAFT

Project Development Documentation

Core Functionality

The application generates a structured five-panel outline, expands it into narration and dialogue, generates illustrations, builds a layout and exports the completed comic as a PDF.

FastAPI Routes

• /

• /generate

• /generate-comic/json

• /export-success

• /test-image

Frontend Templates

• index.html

• comic_preview.html

• export_success.html

Development Environment

The documented setup uses a Python virtual environment, required Python packages and Uvicorn to run the FastAPI application.
