# COMICCRAFT

# Project Executable Files

## Project Structure

• app/

• templates/

• static/

• requirements.txt

• requirements-stable-diffusion.txt

• .env.example

## Important

Keep the existing working source code in the main COMICCRAFT project. This document is submission documentation; it is not a replacement for the source-code folders.

## Security

Do not commit real API keys or secret tokens. Use .env.example for placeholder variable names and keep .env excluded through .gitignore.
